SUMMARY

Game Designer with around 2.5 years of experience shipping hybrid-casual and puzzle-adventure mobile titles. Specialised in core loop design, GDD documentation, progression systems, balancing, and player retention. Proven track record of taking concepts from ideation to shipped MVP. Skilled in Figma, Unity, and AI-assisted prototyping pipelines.

EDUCATION

Asian Institute of Design, *Professional diploma in Game design* 2024 – 2025 | Bangalore, India

B.CA Game & Mobile App Development, *CMR University* 2019 – 2022 | Bangalore, India

PROFESSIONAL EXPERIENCE

Tap N Play Studios (Full Time), *Unity Game Designer* 10/2025 – 03/2026 | Bangalore

- Owned end-to-end design of hybrid-casual game concepts — from core loop ideation through GDD, Figma prototyping, difficulty tuning, and final ship — for two released MVPs, Loopy Duck and Alien Out
- Designed and balanced progression systems and difficulty curves using D3 and D7 retention data as the primary feedback loop, iterating features based on performance insights
- Built an AI-assisted concept validation pipeline combining Figma mockups and HTML prototypes, reducing early-stage validation time significantly
- Led design communication across art, dev, and QA teams through detailed Figma specs covering mechanics, animations, edge cases, and gameplay scenarios
- Designed core loops and player progression systems with hybrid-casual market benchmarks, focusing on engagement depth and fun factor
- Researched competitor ad creatives and high-CPM campaigns across similar hybrid-casual titles, developing ad concepts, scripts, and creative briefs for each project — bridging game design

Surag Studios (Part Time), *Game Designer* 04/2025 – 09/2025 | Remote

- Sole game designer on a narrative-driven mobile title inspired by real-life events — owned all design documentation, interaction systems, and gameplay flows from scratch
- Designed puzzle mechanics and interactive scenarios built around emotional storytelling, ensuring every system served the narrative rather than disrupting it
- Worked directly under a lead designer in a deadline-driven remote setup, consistently delivering production-ready design documents and flows on schedule
- Balanced creative autonomy with alignment to the game's core vision — managing independent workstreams while maintaining narrative and tonal consistency across all systems

G.round (Freelance), *Game reviewer* 02/2023 – 02/2025 | Remote

- Beta game tester: Analyzing pre-release games, providing comprehensive feedback on gameplay, graphics, and mechanics, enhancing gaming experiences.

Vincell Studios (Full Time), *Junior Game Designer* 04/2022 – 11/2023 | Bangalore

- Designed, tested, and shipped 3 published mobile puzzle-adventure games — Escape-Verse Puzzle Adventure, Hidden Escape: Island Mystery, and Hidden Escape: Lost Island — plus 2 additional unreleased titles
- Designed and balanced 20+ unique level mechanisms across multiple titles, engineering difficulty curves that maintained a smooth learning progression, and measurably improved player retention
- Owned all game design documentation end-to-end — GDDs covering puzzle logic, narrative structure, level flows, and UX — using Google Docs, Slides, and Sheets to keep art, dev, and QA aligned throughout production

- Built interactive design flows and UX prototypes in Figma, reducing back-and-forth between design and dev and keeping cross-functional communication tight
- Led internal playtesting sessions, structured feedback collection, and iterated features based on findings — closing the loop between design intent and actual player behavior
- Collaborated directly with artists, developers, and QA testers from concept through launch, maintaining tonal and gameplay consistency across all shipped titles

PERSONAL AI PROJECTS

Personal App Tracker (Play Store & App Store)
Built a tracking tool monitoring new game releases and ranking movement across both stores, used to spot emerging hybrid-casual trends and inform concept pitches at Tap N Play.

Hybrid Casual Prototype Pipeline (AI-assisted)
Built a one-page spec format — core rules, mechanics, win/fail states — structured to feed directly into an AI pipeline and generate playable prototypes, cutting idea-to-testable-game-feel from days to hours.

Custom Text to Voice Generator
Built a personal voice model in Google AI Studio to replace a paid TTS service for video content, handling research, setup, and iteration end to end.

PROJECTS

Alien out , *Tap N Play* 11/2025 – 12/2025

Hidden Escape: Seek & Puzzles , *Vincell Studios*

Loopy Duck , *Tap N Play* 01/2026 – 02/2026

Hidden Escape: Lost Island , *Vincell Studios*

Escapeverse Puzzle Adventure, *Vincell Studios*

Hidden Escape: Murder Mystery2 , *Vincell Studios*

Kitt's Hog - The Nightmare Of Life , *College Project*

GHOSTBUSTER , *College Project*

Echo Shooter 2D , *Solo Project*

SKILLS

Data Analytics & Metrics | Documentation | Game Mechanics | Prototyping | Game Loop Design

Photoshop | Figma | UI/UX | Machinations | Playtesting | AI integration
